

Delivery 3

1. Train result

I adjust my model to overcome the original overfitting problem by adding more patience, adjust more suitable optimizer, and uses more epochs. Finally, my model reaches 71.02% of accuracy.

2. Data processing

I plan to design a web app that can predict the risk rate having the disease of a person based on the 11 information. I have never designed a web app before, so I will try to watch some introduction videos on youtube.
